Scientific communication (Sci-Com) is a part of information science and the sociology of science that studies researchers' use of formal and informal information channels as well as their communicative roles. It also covers the utilization of the formal publication system and similar issues. Within the scientific community, much attention has focused on improving communications between scientists, policymakers, and the public. Sci-Com is an important area of research in meeting these needs. The use of communication methods to portray information clearly, concisely, and effectively, whether that be through presentations, writing, or other approaches, is an essential area of interest within the community. Improving Scientific Communication for Lifelong Learners seeks to improve scientific writing and speaking skills for lifelong learning researchers by developing an adaptive and responsive open and distance application according to universal design principles. The book will focus on the efforts that are centered on improving the content, substantiality, accessibility, and delivery of scientific communications, and to convey clear information to an audience, so its members can understand, use, and build on the information portrayed. The chapters highlight specific areas such as design thinking, distance learning, educational technologies, student success and motivation, and the design of educational environments and learning communities. This book is a valuable reference tool for teachers, academics, communication specialists, students, researchers, developers, and R&D professionals from various fields such as distance learning, online learning, accreditation, qualitative and quantitative research, transhumanism and learning, computer engineering, sociology, and more.

Focusing on this broader security culture framework of analysis, this text uses a comprehensive approach to explore cultural factors empirically and pragmatically as they affect threat environment and assessment along core missions, organizational responses, and the aim of fostering safe and secure societies.

One of the central engines of the current shift towards decentralization and reorientation of healthcare services is mobile healthcare (mHealth). mHealth offers unique opportunities to reduce cost, increase efficiencies, and improve quality and access to healthcare. However, the full impact of mHealth is just beginning to be felt by the medical community and requires further examination to understand the full range of benefits it contributes to medical staff and patients. Mobile Health Applications for Quality Healthcare Delivery explores the emergence of mHealth in the healthcare setting and examines its impact on patient-centered care, including how it has reshaped access, quality, and treatment. Highlighting topics such as patient management, emergency medicine, and health monitoring, this publication supports e-health systems designers in understanding how mobile technologies can best be used for the benefit of both doctors and their patients. It is designed for healthcare professionals, administrators, students, health services managers, and academicians.

During the next few years, most European and World cities will be developing urban agendas. Materials published on the subject have been relatively scarce until now. This edited volume introduces a case study implementation of the European Urban Agenda (EUA) in a cross-border region in the Iberian Peninsula between Spain (Galicia) and Portugal. It explores the implementation of a number of urban core principles in two distinctive regions, serving as the basis for a comparative analysis on how such galvanizing principles work, contained in the EUA. The case presented in this edited volume is the first cross-border urban agenda to be drafted. It is a unique piece that contributes to our understanding of the complexities of implementing and translating a common set of urban European principles to variety of different local milieus. The chapters of the book closely examine the various strands of the implementation of urban policies through the lenses of land use, economic competition, innovation, culture and creative industries, energy, ecology, demographic challenges, housing, social inclusion and democratic governance. These chapters are written by international renowned scholars who were involved in the drawing up of the urban agenda for this territory. The ideas, principles and concepts that they impart can be extrapolated to most cities.

Research Management: Europe and Beyond addresses the myriad responsibilities related to research management and administration. The book incorporates narratives from those working in the field to provide insight into the profession. The book also offers a unique perspective on the topic by incorporating global perspectives to address the growing interdisciplinary nature of research collaboration. The

book outlines practical advice for those in the research management and administration profession at all levels of experience. It is also a useful tool that research institutions and research groups can use to assist in planning and streamlining their research support. Offers a deeper understanding of the research management and administrative landscape through single and collective definitions and experiences Provides an overview of the research environment and explores the international research arena Discusses some of the most complex issues in research management and administration by covering topics such as ethics, innovation, research impact, organizational structures, and processes for the project life cycle

An innovative, internationally developed system to help advance science learning and instruction for high school students This book tells the story of a \$3.6 million research project funded by the National Science Foundation aimed at increasing scientific literacy and addressing global concerns of declining science engagement. Studying dozens of classrooms across the United States and Finland, this international team combines large-scale studies with intensive interviews from teachers and students to examine how to transform science education. Written for teachers, parents, policymakers, and researchers, this book offers solutions for matching science learning and instruction with newly recommended twenty-first-century standards.

Sustainable innovation (SI) is considered to be a key driver of societal progress in an era of enormous economic, environmental and societal challenges, and the uncertainties and future consequences that come with them. This book provides evidence, insights and reflections related to specific issues of governance, the management of sustainable innovation and applying a multi-level, multi-stakeholder approach to sustainable innovation analysis. Building on the European Commission (EU) funded research project “Public Participation in Developing a Common Framework for the Assessment and Management of Sustainable innovation” (CASI), it presents tools for assessing and managing sustainable innovation, and reflects on SI-related policies as well as citizens’ aspirations. The book is intended for scholars in the field of sustainable innovation, as well as to policymakers, innovators, students and citizens.

The framework programmes are the EU's main instruments for the funding of research and innovation in Europe. Horizon 2020 is the eighth EU framework programme for research and innovation for the period 2014-2020 with a budget of nearly EUR 77 billion. It was designed to drive economic growth and create jobs by coupling research and innovation with an emphasis on excellent science, industrial leadership and tackling societal challenges. After three years of implementation, this book presents the results of the interim evaluation of Horizon 2020, in line with Article 32 of the Horizon 2020 Regulation and the Commission's Better Regulation Guidelines. It looks at whether Horizon 2020 is on track to achieve its objectives and provides lessons learnt for the next Horizon 2020 work programme and the preparations of future framework programmes.
