Programs (OSEP) in August 2001 and the activities following that summit. Both the conference and this book were seen as important preludes to congressional reauthorization of the historic Individuals With Disabilities Education Act (IDEA) scheduled for 2002 and subsequent decision making surrounding implementation. The OSEP conference brought together people with different perspectives on LD (parents, researchers, practitioners, and policymakers) and resulted in this book, which examines the research on nine key issues concerning the identification of

Children with learning disabilities. Coverage includes alternative responses to treatment, classification approaches, processing deficit models, and approaches to decision making. Chapter Structure-- Each of the first nine chapters is organized around a lengthy, issue-oriented paper, which presents the most current research on that topic. These primary papers are then followed by four respondent papers that reflect a variety of viewpoints on the topic. Summarizing Chapter -- A small group of researchers (listed in the final chapter) dedicated an

Learning disabilities are among the most common disabilities experienced in childhood and adulthood. Although identifying learning disabilities in a school setting is a complex process, it is particularly challenging in low- and middle-income countries that lack the appropriate resources, tools, and supports. This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification

process. It also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the practices, processes, and systems described may be also used to improve the

contained within the child. Instead, she shows how learning difficulties are best understood as a function of the developmental interaction between the child and the world. Integrating findings from education, developmental psychology, and cognitive neuroscience, she offers a novel approach with direct practical implications. Detailed real-world case studies illustrate how this approach can promote positive outcomes for children who struggle in school.
