receptive to carbohydrate during the first two hours following a training session. To accelerate recovery, consume 300-400 calories of carbohydrate shortly after the training session and another 300-400 Calories of carbohydrate within two hours. This intake of carbohydrates as well as replenishing the fuel stores, also have a positive effect on protein restoration in muscles.

To minimise these risks and perform optimally the next time you exercise, you must allow your body to recover. Exercise recovery involves a number of post-exercise steps that are essential for any exercise regime, regardless of fitness level, the type of physical activity or the exercise intensity.
