Le préparateur en pharmacie – Guide théorique et pratique, 2e édition, aborde avec clarté et simplicité les différents aspects du savoir polyvalent que l'on attend du préparateur, appelé à seconder les pharmaciens titulaires et adjoints dans maintes tâches de l'officine : dispensation, conseil et information du public, préparation et réalisation des PDA (préparations des doses à administrer), vigilance, accueil et vente, documentation, gestion des stocks, administration, hygiène, diététique et maintien à domicile... Le personnel de l'officine doit aujourd'hui exercer sa mission de conseil avec d'autant plus de clairvoyance que le public, exposé à un discours médiatique et publicitaire à forte consonance scientifique, dispose de produits cosmétiques et de thérapeutiques « alternatives » où le naturel et le végétal jouent un très grand rôle, mais où les risques de l'automédication imposent un effort de pharmacovigilance et de toxicovigilance accru. Cette nouvelle édition, entièrement réactualisée, constitue un guide de référence pour les futurs préparateurs en pharmacie en respectant le référentiel du brevet professionnel, ainsi qu'un outil indispensable à la formation continue des préparateurs en mettant à leur disposition une somme d'informations facilement accessibles. Elle est également fort utile aux étudiants en pharmacie, dont le cursus comprend de nombreux stages : d'initiation officinale, d'application des enseignements coordonnés et de pratique professionnelle.

Training Circular (TC) 3-09.81, "Field Artillery Manual Cannon Gunnery," sets forth the doctrine pertaining to the employment of artillery fires. It explains all aspects of the manual cannon gunnery problem and presents a practical application of the science of ballistics. It includes step-by-step instructions for manually solving the gunnery problem which can be applied within the framework of decisive action or unified land operations. It is applicable to any Army personnel at the battalion or battery responsible to delivered field artillery fires. The principal audience for ATP 3-09.42 is all members of the Profession of Arms. This includes field artillery Soldiers and combined arms chain of command field and company grade officers, middle-grade and senior noncommissioned officers (NCO), and battalion and squadron command groups and staffs. This manual also provides guidance for division and corps leaders and staffs in training for and employment of the BCT in decisive action. This publication may also be used by other Army organizations to assist in their planning for support of battalions. This manual builds on the collective knowledge and experience gained through recent operations, numerous exercises, and the deliberate process of informed reasoning. It is rooted in time-tested principles and fundamentals, while accommodating new technologies and diverse threats to national security.

In one complete volume, this essential reference presents an in-depth overview of the theoretical principles and techniques of electrical machine design. This timely new edition offers up-to-date theory and guidelines for the design of electrical machines, taking into account recent advances in permanent magnet machines as well as synchronous reluctance machines. New coverage includes: Brand new material on the ecological impact of the motors, covering the eco-design principles of rotating electrical machines An expanded section on the design of permanent magnet synchronous machines, now reporting on the design of tooth-coil, high-torque permanent magnet machines and their properties Large updates and new material on synchronous reluctance machines, air-gap inductance, losses in and resistivity of permanent magnets (PM), operating point of loaded PM circuit, PM machine design, and minimizing the losses in electrical machines> End-of-chapter exercises and new direct design examples with methods and solutions to

real design problems> A supplementary website hosts two machine design examples created with MATHCAD: rotor surface magnet permanent magnet machine and squirrel cage induction machine calculations. Also a MATLAB code for optimizing the design of an induction motor is provided. Outlining a step-by-step sequence of machine design, this book enables electrical machine designers to design rotating electrical machines. With a thorough treatment of all existing and emerging technologies in the field, it is a useful manual for professionals working in the diagnosis of electrical machines and drives. A rigorous introduction to the theoretical principles and techniques makes the book invaluable to senior electrical engineering students, postgraduates, researchers and university lecturers involved in electrical drives technology and electromechanical energy conversion.
