Furthermore, final drives, power take-offs and transfer gearboxes for 4-WD-vehicles are considered. Since the release of the

About 40% of the

The light-duty
vehicle fleet is
expected to

Undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel

By the end of the
next decade, cars
and light-duty
trucks will be more
fuel efficient, weigh
less, emit less air
pollutants, have
more safety
features, and will be
more expensive to

Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials,

by 2030, the
deployment of
alternative methods
to propel and fuel
vehicles and
alternative modes
of transportation,
including
autonomous
vehicles, will be
well underway.
